

IN THE ABSTRACT:

Please replace the abstract of the disclosure with the following amended abstract of the disclosure:

~~An object of the present invention is to reduce or eliminate the occurrence of a variety of failure modes (shrink, dark spot and the like) in a light emitting element having an organic compound. The present invention suppresses a non light emitting region generated immediately after a~~ A light emitting element has been fabricated by making ~~the~~ a barrier 111 ~~have~~ having a curved surface having a radius of curvature at the upper portion or lower portion, ~~washes the washing a~~ surface of ~~the~~ an anode 110 with a porous sponge in order to remove minute grains dotted on the surface of the anode, and ~~suppresses the occurrence of a shrink by~~ performing the vacuum heating in order to remove absorbed water of a whole of ~~the~~ a substrate on which a TFT and ~~[[a]]~~ the barrier have been provided immediately before ~~the~~ a layer 112 containing an organic compound is formed.
